

**Pocket Black Hole** is a simple app that allows you to play with the light-bending effect of a black hole. Take a selfie, or a photo of your friends, with a black hole!

A black hole is a very compact and massive object, in fact its gravity is so strong that it will bend the path of light passing close by. If the light gets too close, it cannot escape, and that is why the object appears to us as a black hole in the sky.
